NBER SI
Gender in the Economy

July 24th, 2024

Can female leadership reduce conflict violence?

- ▶ Gender gap in behaviors and decisions across different contexts:
 - ▶ Competition and risk taking (Niederle & Vesterlund, 2007; Exley et al., 2020; Castillo et al., 2013)
 - ▶ Policy making (Chattopadhyay & Duflo, 2004; Brollo & Troiano, 2016)
- ▶ Existing work from different disciplines point towards a gender gap in conflict resolution (Ruddick, 1982; Goldstein, 2003)
- ▶ Not much causal empirical evidence when it comes to conflict (Dube & Harish, 2020)
 - ▶ Male dominance in conflict-related matters (Pinker, 2012)
 - ▶ Despite a rising trend in the number of active armed conflicts (Rohner, 2017)

This paper

- ▶ Use close elections for municipal mayor decided between a female and a male in Colombia between 1997 and 2015.
 - ▶ Election of a woman results in a 60% reduction in conflict violence during the following electoral cycle.
- ▶ Use novel data on the guerrilla internal structure and gender of command line.
 - ▶ Female leadership in the guerrilla correlated with lower levels of violence.
 - ▶ Larger effects when there is a woman on both sides of the conflict (Smith & Price, 1973; Tannen, 1994).
- ▶ Use government manifestos and text analysis to document a gender gap in the use of “belligerent” vocabulary.

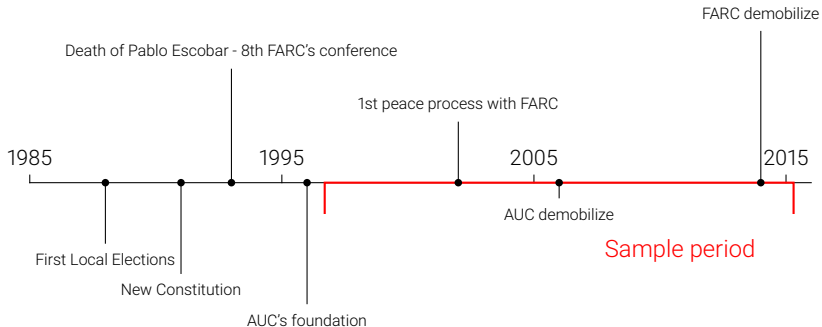

Gloria Cuartas - an illustrative case study

"I always come as a mediator in conflicts and a creator of projects (1997)".

- ▶ Local housing councilor for conflict victims in the 1980's → Mayor in 1994 → Senator in 1998.
- ▶ They helped their communities by mediating between them and the government or international organizations.

Conflict in Colombia since 1990

- ▶ Partisan violence → political exclusion → communist guerrillas. (Bushnell, 1993).
- ▶ Drug violence → private armies → Right-wing paramilitaries (Fergusson et al., 2019).
- ▶ Government-paramilitary collusion to fight guerrillas (Acemoglu et al., 2013).

Roadmap

1. Introduction
2. Data & Empirical specification
3. Effect of female leadership on conflict
4. Female leadership in the guerrillas
5. Mechanisms

Data - violence and elections

- ▶ Daily count of violent actions coded from local news sources (updated version of Restrepo et al. (2003)). ●
 - ▶ Actor (Guerrilla, Paramilitaries, government forces).
 - ▶ Type (e.g., attack, clash).
 - ▶ Motive (e.g., attack on the mayors life).
- ▶ 6 rounds of local election results between 1997 and 2015 from national electoral authority.
- ▶ Municipality balance sheets and measures of provision of public goods from (Acevedo & Bornacelly, 2014).

Empirical specification

- ▶ I use a RDD with the following specification:

$$y_{i,t} = \alpha + \beta_1 Female_{i,t} + \beta_2 f(X_{i,t}) + \beta_3 Female_{i,t} \times f(X_{i,t}) + \mathbf{Z}_{i,t} \gamma + \varepsilon_{i,t}$$

- ▶ $Female_{i,t}$: indicator = 1 when a female is elected in municipality i and electoral cycle t .
- ▶ $X_{i,t}$: vote share for for the female candidate. $|X_{i,t}| < h$, where bandwidth h chosen following (Calonico et al., 2019).
 - ▶ $f(.)$ is a flexible polynomial of the vote share.
- ▶ $y_{i,t}$: per-capita conflict outcome (attacks or clashes).
- ▶ $\mathbf{Z}_{i,t}$: electoral cycle FE's and municipal characteristics

Roadmap

1. Introduction
2. Data & Empirical specification
3. Effect of female leadership on conflict
4. Female leadership in the guerrillas
5. Mechanisms

Female leadership and violence

<i>Dep. var: yearly average # of attacks per 100,000 inhabitants</i>				
	(1)	(2)	(3)	(4)
	<i>Guerrilla Violence</i>		<i>Paramilitary Violence</i>	
Female mayor	-1.200** (0.571)	-1.306** (0.602)	-0.267 (0.705)	-0.105 (0.687)
Observations	1045	1045	1045	1045
Mean of dep. var	1.979		1.069	
Controls:	X	✓	X	✓
Electoral cycle FE's	X	✓	X	✓

Notes: Robust standard errors in parenthesis. *** $p < 0.01$, ** $p < 0.05$, * $p < 0.1$. Observation is the municipality per electoral period. Optimal (Calonico et al., 2019) robust bandwidth and bias-corrected estimators used in all regressions. Running variable is the share of votes out of the two highest votings for female candidate.

Extensive margin

Spatial spillovers

Identification, robustness and measurement

- ▶ Identification:
 - ▶ Balance on observable characteristics ●
 - ▶ McCrary ●
 - ▶ Violence in the previous year ●
- ▶ Robustness:
 - ▶ Bandwidths ●
 - ▶ Alternative cutoffs ●
 - ▶ Higher order polynomials ●
 - ▶ Geographical fixed effects ●
- ▶ Measurement:
 - ▶ Alternative normalizations & samples ●
 - ▶ Anti-personnel mines ●

Assessing the effects

- ▶ 1.3 fewer attacks per year and 100,000 inhabitants → 60% decline in violence.
- ▶ Why is there a difference between armed groups?
 - ▶ Different gender dynamics and composition between groups (Cruz & Olarte, 2021; Wirtz et al., 2014; Salazar, 2019; Vega, 2019).
- ▶ These differences have been cited as a reason for the peace negotiations (Barrios Sabogal & Richter, 2019).
- ▶ In the next section, I use data on the guerrilla commanders and location to document this female influence in the guerrillas.

Roadmap

1. Introduction
2. Data & Empirical specification
3. Effect of female leadership on conflict
4. Female leadership in the guerrillas
5. Mechanisms

Exploiting the FARC's administrative division and the gender its commanders

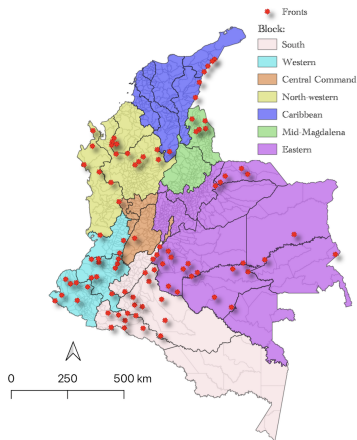

- ▶ Compare municipalities where the guerrilla unit in the region (r) had a female commander, with those where the unit was led by men.
 - ▶ Guerrilla warfare was harder for women → few female leaders (Lobo, 2021).

$$y_{i,t} = \alpha + \beta_1(\text{Female guerrilla})_{i,t} + Z_i\gamma + \alpha_t + \alpha_r + \varepsilon_{i,t}$$

- ▶ Combine the close races with guerrilla data to test the reciprocity idea of (Smith & Price, 1973; Tannen, 1994).
 - ▶ RD with split sample according to the gender of guerrilla commander.

Geographic division of FARC's units - data

Figure: FARC's blocks & fronts

- ▶ Geocode FARC units from military intelligence reports.
- ▶ Combine field and qualitative work to identify most salient female guerrilla members.
 - ▶ Determine the gender composition of each unit's line of command.

Measures of guerrilla presence and female leadership

- ▶ I study 2 types of guerrilla units separately (blocks and fronts):
 - ▶ Blocks are more stable, fronts have finer variation.
- ▶ I define female leadership in the FARC in 2 different ways, each relying on different assumptions.

Assumptions:

- Stability*: units command and presence doesn't change without being observed.
 - ▶ Relies on variation across space, most demanding on guerrilla activity.
- Visibility*: commanders (and units) are only active when observed.
 - ▶ Allows me to compare the same municipality in time, smallest sample.

Female leadership in the guerrilla and violence

<i>Dep. var: yearly avg. # of guerrilla attacks (per 100,000 inhabitants)</i>				
	(1)	(2)	(3)	(4)
	<i>Type of FARC structure with female leadership</i>			
	Block		Front	
Female FARC commander	-1.683** (0.777)	-1.195* (0.613)	-1.683** (0.777)	-1.432** (0.593)
Observations	2,175	6,013	2,175	1,023
Type of variation in FARC presence:	Stability	Visibility	Stability	Visibility
Fixed Effects:				
Year	✓	✓	✓	✓
Region	✓	✓	✓	✓
Notes: Standard errors clustered by state-year in parenthesis. *** p<0.01, ** p<0.05, * p<0.1. OLS estimations using municipalities × year as observation in all columns. All regressions include year and region fixed effects.				

Heterogeneous effects by female leadership in guerrillas

<i>Dep. var: avg. # of guerrilla attacks per 100,000 inhabitants during electoral cycle</i>				
	(1)	(2)	(3)	(4)
<i>Panel A: Close races in places where FARC structure had female commanders</i>				
	Block		Front	
Female mayor	-8.216** (3.884)	-1.493 (0.965)	-5.935** (2.402)	-5.967* (3.056)
Observations	115	245	184	67
Mean of dep. var	3.819	2.367	2.813	2.562
<i>Panel B: Close races in places where FARC structure didn't have female commanders</i>				
	Block		Front	
Female mayor	1.571 (3.763)	-1.200 (1.134)	-1.540 (1.793)	-0.652 (6.356)
Observations	123	344	175	80
Mean of dep. var	4.048	1.819	3.408	4.526
FARC variation:	Stability	Visibility	Stability	Visibility

Roadmap

1. Introduction
2. Data & Empirical specification
3. Effect of female leadership on conflict
4. Female leadership in the guerrillas
5. Mechanisms

What is the underlying cause for the drop in violence?

1. Female mayors have more ideological affinity with guerrilla groups (Edlund & Pande, 2002).
 - ▶ Estimate the heterogeneous effect by partisan affiliation.
 - ▶ → effect holds even holding partisan affiliation constant.
2. Third-group interference driving guerrillas out of a region.
 - ▶ No evidence of armed or financial interference.
3. Gender differences in preferences towards public goods provision and public policy (Chattopadhyay & Duflo, 2004).
 - ▶ Approximate ex-ante preferences for peace using campaign manifestos → gender gap in the belligerency of language.
 - ▶ No ex-post differences in other dimensions of public policy.

Mechanisms

1. Female mayors have more ideological affinity with guerrilla groups (Edlund & Pande, 2002).
 - ▶ Estimate the heterogeneous effect by partisan affiliation.
 - ▶ → effect holds even holding partisan affiliation constant.
2. Third-group interference driving guerrillas out of a region.
 - ▶ No evidence of armed or financial interference.
3. Gender differences in preferences towards public goods provision and public policy (Chattopadhyay & Duflo, 2004).
 - ▶ Approximate ex-ante preferences for peace using campaign manifestos → gender gap in the belligerency of language.
 - ▶ No ex-post differences in other dimensions of public policy.

Heterogeneous effects by ideology

Dep. var. is yearly average # of guerrilla attacks per 100,000 inhabitants.

Heterogeneity dimension :	Victory of right-wing candidate	Candidate from a traditional party:	
		Lost	Incumbent
	(1)	(2)	(3)

Panel A: Municipalities where dimension = 1.

Female mayor	-1.112 (0.730)	-3.189*** (1.117)	-1.665** (0.779)
Observations	143	446	546
Mean of dep. var	0.203	2.787	2.609

Panel B: Municipalities where dimension = 0.

Female mayor	-1.102* (0.632)	0.335 (0.578)	-0.382 (0.802)
Observations	902	599	499
Mean of dep. var	2.260	1.377	1.289

Mechanisms

1. Female mayors have more ideological affinity with guerrilla groups (Edlund & Pande, 2002).
 - ▶ Estimate the heterogeneous effect by partisan affiliation.
 - ▶ → effect holds even holding partisan affiliation constant.
2. Third-group interference driving guerrillas out of a region.
 - ▶ No evidence of armed or financial interference.
3. Gender differences in preferences towards public goods provision and public policy (Chattopadhyay & Duflo, 2004).
 - ▶ Approximate ex-ante preferences for peace using campaign manifestos → gender gap in the belligerency of language.
 - ▶ No ex-post differences in other dimensions of public policy.

Financial and military influence of other conflict actors

	(1)	(2)	(3)	(4)	(5)
	<u>Violent intrusion</u>			<u>Financial intrusion</u>	
Dependent variable is:	# of actions per 100,000 inhabitants by:			log of	% of income
	Army	Police	Paramilitary	Gov't transfers	are transfers
Female mayor	0.907 (1.023)	-0.271 (0.214)	-0.273 (0.728)	0.213 (0.201)	-0.269 (0.323)
Observations	1045	1045	1045	959	738
Mean of dep. var	1.635	0.555	1.167	8.360	8.842

What is the underlying cause for the drop in violence?

1. Female mayors have more ideological affinity with guerrilla groups (Edlund & Pande, 2002).
 - ▶ Estimate the heterogeneous effect by partisan affiliation.
 - ▶ → effect holds even holding partisan affiliation constant.
2. Third-group interference driving guerrillas out of a region.
 - ▶ No evidence of armed or financial interference.
3. Gender differences in preferences towards public goods provision and public policy (Chattopadhyay & Duflo, 2004).
 - ▶ Approximate ex-ante preferences for peace using campaign manifestos → gender gap in the belligerency of language.
 - ▶ No ex-post differences in other dimensions of public policy.

Campaign manifestos as proxy for preferences

- ▶ Documents produced by candidates to transmit information to voters during the campaign.
- ▶ Not compulsory before 2015; no standardized format
 - ▶ Non-random subsample → no causality
 - ▶ Not suited for text-mining algorithms.
- ▶ Measure tone differences by counting “peaceful” words.
 - a) Supervised classification: categorize the universe of words in the documents.
 - b) Keyword approach: search for key terms from an AI-generated list.

$$y_{i,t} = \alpha + \beta_1 Female_{i,t} + \alpha_t + \alpha_r + \varepsilon_{i,t}$$

- ▶ OLS regression. $y_{i,t}$ = relative use of peace/conflict terms.

Gender gap in the type of language used

Dependent variable is the # of words that relate to:	<i>Words classification</i>		<i>AI keywords</i>		
	Peace	Conflict	Peace		Conflict
	(1)	(2)	Unconditional (3)	Conditional (4)	(5)
Female mayor	2.641** (1.200)	1.114 (1.119)	2.792** (1.182)	2.887** (1.205)	-0.213 (0.268)
Observations	1,114	1,114	1,114	1,093	1,114
Mean of dep. var	20.540	14.565	21.588	22.004	1.942

Notes: Standard errors clustered at the municipality level in parenthesis. *** $p < 0.01$, ** $p < 0.05$, * $p < 0.1$. Observation unit is the elected mayor. All regressions control for the total number of words used in the program, and include year and state fixed effects.

Placebo exercises

Keywords examples

Ex-post preferences

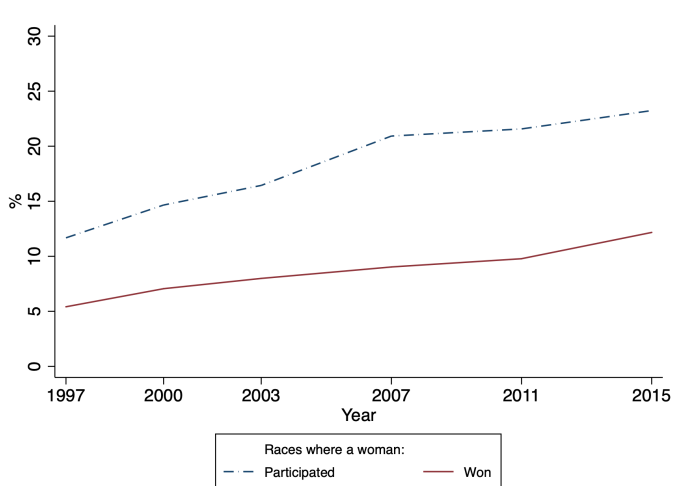

Summing-up

- ▶ In municipalities where a woman was elected as a mayor *conflict violence* declined.
 - ▶ Driven by guerrilla attacks, no change on paramilitary violence.
- ▶ Female leadership in the guerrilla also correlated with lower violence.
- ▶ Differences in campaign manifestos suggest different preferences towards peace and conflict.
- ▶ Corollary:
 - ▶ Institutional differences can account for the difference with the results in (Dube & Harish, 2020).

Descriptive Statistics

	Mean	Std. Dev	Median	Min	Max
--	------	----------	--------	-----	-----

Panel A: Violence outcomes

Average yearly # of ... per 100,000 inhabitants during government period

Attacks

Guerrilla	2.0	6.1	0	0	71
Paramilitary	1.1	4.1	0	0	65

Casualties

Guerrilla	5.7	29.8	0	0	423
Paramilitary	2.9	17.0	0	0	407

Panel B: Electoral variables

Vote share	0.481	0.120	0.487	0.0	1.0
% of victories	0.443				

Panel C: Female candidates characteristics

% of female candidates that represent:

Traditional parties	0.440
Right-wing parties	0.128
Left-wing parties	0.022

Notes: 1,045 observations in all panels. Vote share in panel B is percentage of votes for female candidate out of the total votes received by top 2 candidates. Traditional parties in panel C are Liberal and Conservative parties. Ideology in panel C drawn from 132019Fergusson et al.Fergusson, Querubin, Ruiz-Guarin, & Vargas (). In panel D, rurality index is the ratio of rural to total population; Distance to capital is linear distance to State's capital city; Transfers corresponds to non-automatic transfers by central government; Functionaries investigated stands for # of civil servants prosecuted by the General Attorney's office for corruption related charges; Indigenous settlement is an indicator of whether municipality was a pre-colonial settlement. Smuggling routes are indicators of whether a municipality is crossed by each type of route. * only 786 observations available.

PROGRAMA DE GOBIERNO DEL DOCTOR GABRIEL ANTONIO RIVERA CUETO, CANDIDATO A LA ALCALDIA MUNICIPAL DE SUAN ATLÁNTICO; PERIODO 2.004 – 2.007

PERFIL DEL CANDIDATO

Medico Doctor Gabriel Antonio Rivera Cueto, nació el 24 de febrero de 1.973, en el Municipio de Suan de la trinidad.

ESTUDIOS:

- Bachiller académico del colegio Bachillerato Mixto de Suan
- Medico Cirujano Universidad Metropolitana de Barranquilla.

EXPERIENCIA

- Medico Cirujano Hospital Metropolitano de Barranquilla.
- Medico Cirujano Escuela Naval Barranquilla.
- Medico Cirujano Hospital Niño Jesús
- Medico Cirujano Basilio Vergara y Velazco
- Medico Cirujano Unidad Administrativa Centro de Salud de Santa Lucia.
- Concejal del Municipio de Suan y presidente de esa honorable corporación.

CARACTERÍSTICAS:

Su formación científica y social le permite analizar con claridad los problemas del ser humano y de su entorno y decidir con acierto sus soluciones.

Esta característica, sumada a su profundo sentimiento por todas las cosas de la vida, junto con la capacidad de tolerancia y servicio a la comunidad, constituyen su principal fortaleza, lo que lo diferencia de los politicos tradicionales.

PROGRAMA DE GOBIERNO:

La postulación de mi nombre a la Alcaldia del Municipio de Suan, surge como respuesta a la necesidad expresada por la ciudadanía de continuar con el desarrollo social y económico emprendida en las administraciones de Voluntad Popular y de construir juntos en Municipio que queremos.

El Municipio que queremos es un Municipio real, autentico, en plena concordancia con sus necesidades, desde sus presupuestos de ingreso, gastos e inversión. Un Municipio que inevitablemente debe combinar los esfuerzos administrativos y comunidad para alcanzar el desarrollo deseado.

Sin dejar de atender los sectores básicos definidos por la ley, el programa de Gobierno contempla la ejecución de tres ejes estratégicos dirigidos a garantizar el desarrollo económico y social del Municipio de Suan.

ACCIONES CON SENTIDO SOCIAL	
AYUDAS CONSTRUCTIVAS DEL DESARROLLO SOCIAL	1. Construcción de infraestructura de la Manó para la Manó: mejorar el desarrollo de la Manó y mejorar el desarrollo de la Manó. 2. Construcción de infraestructura de la Manó para la Manó: mejorar el desarrollo de la Manó y mejorar el desarrollo de la Manó. 3. Construcción de infraestructura de la Manó para la Manó: mejorar el desarrollo de la Manó y mejorar el desarrollo de la Manó.
UNIDOS POR UNA VIOLENCIA DIGNA	1. Adquisición de 100 viviendas para la población de bajos recursos. 2. Construcción de 100 viviendas para la población de bajos recursos. 3. Construcción de 100 viviendas para la población de bajos recursos.
POBRE HISTORICO CULTURAL Y TURISTICO	1. Construcción de 100 viviendas para la población de bajos recursos. 2. Construcción de 100 viviendas para la población de bajos recursos. 3. Construcción de 100 viviendas para la población de bajos recursos.
